

Our trip at

# Segrino lake

Our trip started at the Eupilio school at the 8 in the morning. We started to walk and we arrived at the park near the lake. They gave us a sheet to fill out in the morning with the name of the plants and other things

After we start the walk around the lake whit guide.

We stopped in some point to sew the plants and we search the scientific name

*Fraxinus excelsior*

*Carpinus betulus*

*Alnus glutinosa*

After we chose to take a break to relax.

We stopped near the lake and when we ate we saw diver types of animals.

They showed us some tadpoles and frogs .

Tadpoles are in danger because there are a lot of predators

After we saw the rules to respect the nature:

Don't camping

Don't leave trash

Don't take flowers and plants

Don't feed the animals

And we wrote the rules we think are the most important

Later we tested the water :  
PH,

- Temperature
- Conductivity
- Nitrites and carbonates

The quality of the water of the Segrino lake is very good and it's clean .

There is a legend about the chapel.

A man was so drunk that he fell asleep in his cart and his oxes continued to move forward and walked across the frozen Segrino lake.

When the man woke up and realized what had happened he decided to thank God for its protection so he built the chapel near the lake.

Finally after the walk around the lake we all ate a delicious Silician ice cream . And we went back to school .

End
