

# TRIP

to

# COMO

## Departure from Merone

On Wednesday, 10th May 2023 we and the French students left Merone at 8.30 a.m. to go to Como.

## Arrival at Villa Geno

When we arrived our guide, Francesca, explained us something about Lake Como.

## The science lesson

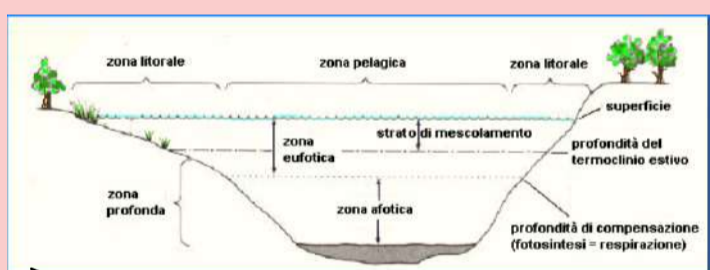

Francesca talked about the origin of Lake Como and the ecosystem on the earth and in the lake.

After that she explained the vertical current. She said that it hasn't been this phenomenon for 6 years...

**and IT'S A PROBLEM.**

IT is a big problem because the oxygen is only on the surface of the lake and it doesn't arrive to the bottom of the lake and so the plants die.

## Experiments

We took a glass of water from the lake and measured the temperature. Later we did a test of the water for the salt, PH and the oxygen.

## Conclusion

We and our French mates learned about the water of Lake Como and its ecosystem, the plankton and the different areas of the lake.
